

Plate cooler Series S

Bolted

OKR 1240

Generally

The plate cooler with removable plates consists of:

- the frame
- the plate package
- the connections
- the tense parts

The package consists of a plate, the thermodynamic performance corresponding number of plates profiled that are assembled in a single frame into a compact.

Function

Each plate is equipped with a seal that is inserted into a groove. This seal ensures sealing both externally as well as the media themselves. On the heat-exchanging media flow through the plate cooler involved in counter flow.

Flexibility

The design of the plate cooler allows easy opening of the appliance. Thus it can be easily cleaned. Next, it is possible through the plate cooler, add or remove panels adapt to changing operating conditions.

Max. Operating Pressure

Standard 10 bar or 16 bar.
Other operating pressures on inquiry.

Operating Temperature

Up to 140 °C

Test pressure

21 bar

Tiling- and Gasket Materials

Standard-Plattes: AISI 316 (No. 1.4401), AISI 304
Special materials: Titan, Hastelloy
Seals: NBR, EPDM, FPM

Other materials on request.
Other plate sizes on request.
